## BETWEEN TWO DIMENSION (PORTUGUESE EDITION)

Beside the material world, tangible, there is another with which it interacts and is present since the origin of life more rudimentary. An infinite loop, forms of matter and energy interact in a mutual and continuous progress. Between two dimensions it is a theory that seeks rational explanations about possible another dimension, very close to us, also called by some religions or doctrines of the spiritual world. Possibilities are unproven but plausible covering aspects of still unexplained biological phenomena. The emphasis is this, to try and clarify obscure matters or not fully understood in light of a new theory, in order to contribute more than perhaps future research whose objectives are healing and reduction of human suffering. The hypotheses are not of a religious nature, are just the set of a scientifically unproven theory but seeks to fit the paradigms of the universe.
